

HOME is where the SWAB is...

The HIV Prevention Program is offering confidential, free, no contact STI testing for Contra Costa residents ages 17 years and older. We offer testing for HIV as well as gonorrhea and chlamydia in the throat, anus, vagina, and urethra. The process takes less than one hour, and is designed to help slow the spread of COVID-19 by enabling our community members to safely test for STIs in a private place of their choosing.

How it works:

- A certified test counselor brings the test kits to your front door/private space in personal protective equipment (PPE).
- You collect the samples in the privacy of your own bathroom/private space: oral swab for HIV, vaginal, throat, and rectal swabs for gonorrhea and chlamydia, and urine sample for gonorrhea and chlamydia (individuals with a penis).
- We take the samples for gonorrhea and chlamydia to the lab for processing. Gonorrhea and chlamydia test results are available within seven business days.
- HIV rapid tests are immediately run by the testing team and results are available in 20 minutes.
- If any of your tests come back positive, we help link you to treatment.
- We leave you a bag full of condoms and lube!
